

## NAFLD Enrollment Support

Nonalcoholic Fatty Liver Disease, or NAFLD, studies present unique enrollment challenges that Pro-ficiency directly addresses.

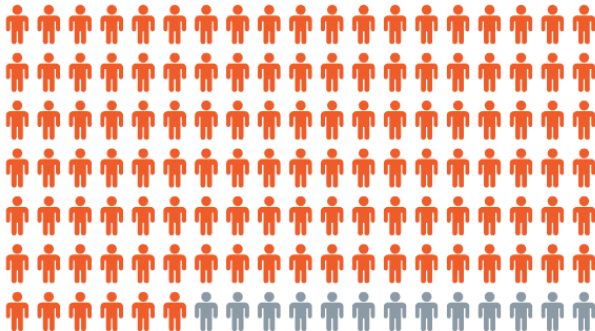

Using our proprietary platform, coupled with the vast expertise of our program development team, Pro-ficiency has created a quick-release module specific to NAFLD and NASH studies that is ready to help new studies, or those experiencing an enrollment lag.

Our module helps sites identify and enroll subjects, including subjects often missed due to temporary criteria, and provides them with essential job aids to visually represent complex inclusion/exclusion (I/E) criteria. And we can deliver all this in under a month. Enrollment optimized. Now.

### How do we know it works?

We tested the module out on a new study, providing it to sites as an *Optional* resource. With already overburdened sites, our expectation for volunteer participation in the training to be low. We were thrilled to see that the MAJORITY of sites (nearly 500 participants) elected to spend valuable time in the module. Here is what they said:

**Over 90% of learners in every role found the job aid helpful**

- Learners reported Job Aid as helpful
- Learners did not report Job Aid as helpful

**70% of PIs reported the tool as 'Very Helpful'**

- PIs reported Job Aid as 'very helpful'
- PIs did not report Job Aid as 'very helpful'

### What does this tell us?

The majority of site staff, in all roles, are invested in learning how to optimize subject enrollment at their site and the Pro-ficiency approach is not only well received, but also effective for bolstering enrollment for your NAFLD or NASH studies.

We'd love to show you how it works.
